

WEB TECHNOLOGIES LAB SYLLABUS**OBJECTIVE:**

The objective of this lab is to develop an ability to design and implement static and dynamic website.

OUTCOMES:

At the end of the course, students should be able to:

- Design and implement dynamic websites with good aesthetic sense of designing and latest technical know-how's.
- Have a Good grounding of Web Application Terminologies, Internet Tools, E – Commerce and other web services.

| S. No. | LIST OF EXPERIMENTS | Page No. |
|---------------|--|-----------------|
| 1 | Write a java Program which stores the user login information in database in a server, creates user interface for inserting, deleting, retrieving information from the database accepts user login information and verifies it. | 3 |
| 2. | Write a java Program which establishes a connection between client and server and transfers data. Transfers the data without establishing a connection | 5 |
| 3. | Write a java program to create an employee class with the data members Emp_id, name, Department and create member function to get the employee information ,display the details. | 9 |
| 4. | Write a java program to create a package for simple arithmetic operations. | 12 |
| 5. | Write a java Program to create user defined Exception called "String Not Found" Exception" when the user entered input is not Equal to "INDIA" | 15 |
| 6. | Write a HTML to create user registration form with the following constraints; validate the registration, user login, user profile, and payment by credit card pages using java script | 17 |
| 7. | Create and save an XML document at the server, which contains 10 users information .Write a program which takes user id as input and returns the user details by taking the user information from the XML document | 27 |

| S. No. | LIST OF EXPERIMENTS | Page No. |
|--------|--|----------|
| 8. | Write a XHTML form for Employee information like Emp_id, Name, Department Name, Phone, Email using JavaScript check the validation for each fields(the first character of Emp_id is followed by number ,name should accept 20 characters, Phone max 8 digits, email) | 35 |
| 9. | Write a java servlet program to display the current time on the server | 42 |
| 10. | To write HTML and servlet to demonstrate invoking a servlet from html | 44 |
| 11. | Write a java servlet program to change the Background color of the page by the color selected by the user from the list box. | 47 |
| 12. | Write a java servlet program to get personal Details about the user(Like name, Address, City, Email-id) and check whether the user is eligible to vote or not. | 51 |
| 13 | Write a java servlet program to create cookie and keep it alive on the client for 30 minutes | 54 |
| 14 | Write a java servlet program to display the various client information like Connection, Host, Accept-Encoding, User Agent | 56 |
| 15 | Write a java servlet program to conduct online examinations and to display student mark list available in the database | 59 |
| 16 | Write a java servlet program to display the book information using JDBC. | 64 |
| 17 | Write a java servlet program to create a session and display the various information's like(Last Accessed time, Modified time, Expiration) | 67 |
| 18 | Write a JSP program to display the number of visitors visited the page. | 70 |
| 19 | Write a JSP program to implement the Book Information using JDBC. | 72 |
| 20 | Write a JSP program to implement the Telephone Directory | 75 |

EXPERIMENT- 1**1.1 OBJECTIVE:**

Write a java Program which stores the user login information in database in a server, creates user interface for inserting, deleting, retrieving information from the database accepts user login information and verifies it.

1.2 RESOURCE:

Microsofft MS Access,JDK 1.6

1.3 PROGRAM LOGIC:

1. Establish connection between MS Access and JDBC.
2. Create Table
3. Insertion of values in table.
4. Retriving values from database table.
- 5.Deleting values in Database.

1.4 PROCEDURE:

- 1.Go to ODBC and create System DSN.
- 2.Install JDK
- 3.Compile Java Program

1.5 PROGRAM:

```
import java.sql.*;

class OracleCon{

public static void main(String args[]){

try{

//step1 load the driver class

Class.forName("sun.jdbc.odbc.JdbcOdbc");

String url = "jdbc:odbc:Driver={Microsoft Access Driver (*.mdb, *.accdb)};DBQ=" +
"C:\\Database1.accdb";

//step2 create the connection object

Connection con=DriverManager.getConnection( url);

//"jdbc:odbc:tag","scott","tiger");

//step3 create the statement object

Statement stmt=con.createStatement();

//step4 execute query

ResultSet rs=stmt.executeQuery("select * from bank");
```

```
while(rs.next())  
  
System.out.println(rs.getInt(1)+" "+rs.getString(2));  
  
//step5 close the connection object  
  
con.close();  
  
}catch(Exception e){ System.out.println(e);}  
  
}  
  
}
```

1.6 PRE LAB QUESTIONS

1. what is jdbc?
2. Which driver we are using in the lab?
3. Differentiate Jdbc and Odbc?
4. What are the classes available in the java.sql package
5. What is the query for Insert the data in the database

1.7 LAB ASSIGNMENT

1. Create table in MS Access.
2. Practice SQL Queries Related to Insert ,Delete and Select.
3. Write a simple java program and Compile and Execute.

1.8 POST LAB QUESTIONS

1. Which function we are using for getting the data from the database
2. Does java is Platform Independent?
3. What is authentication?
4. Which method is used to get the form information at the server side?
5. What is server side validations?

1.9 INPUT & OUTPUT:

Input & output:

1 tagore

2 sai

EXPERIMENT- 2**2.1 OBJECTIVE:**

Write a java Program which establish a connection between client and severand transfers data. Transfers the data without establishing a connection.

2.2 RESOURCE:

JDK 1.6

2.3 PROGRAM LOGIC:

1. Compile java program with Command Line argument.
2. Convert given port number into integer.
3. Through Socket Connect client and Server program with same portnumber.

2.4 PROCEDURE:

1. Compile client and server programs
2. Execute Server Program
3. Execute Client Program in separate Command Prompt.

2.5 PROGRAM:

Client Program:

```
import java.net.*;
import java.io.*;

public class GreetingClient
{
    public static void main(String [] args)
    {
        String serverName = args[0];
        int port = Integer.parseInt(args[1]);
        try
        {
            System.out.println("Connecting to " + serverName +
                " on port " + port);
            Socket client = new Socket(serverName, port);
            System.out.println("Just connected to "
                + client.getRemoteSocketAddress());
```

```
OutputStream outToServer = client.getOutputStream();
DataOutputStream out = new DataOutputStream(outToServer);
out.writeUTF("Hello from " + client.getLocalSocketAddress());
InputStream inFromServer = client.getInputStream();
DataInputStream in = new DataInputStream(inFromServer);
System.out.println("Server says " + in.readUTF());
client.close();
} catch (IOException e)
{
    e.printStackTrace();
}
}
```

ServerProgram:

```
import java.net.*;
import java.io.*;
public class GreetingServer extends Thread
{
    private ServerSocket serverSocket;
    public GreetingServer(int port) throws IOException
    {
        serverSocket = new ServerSocket(port);
        serverSocket.setSoTimeout(10000);
    }
    public void run()
    {
        while(true)
```

```
{
    try
    {
        System.out.println("Waiting for client on port " +
            serverSocket.getLocalPort() + "...");
        Socket server = serverSocket.accept();
        System.out.println("Just connected to "
            + server.getRemoteSocketAddress());
        DataInputStream in =
            new DataInputStream(server.getInputStream());
        System.out.println(in.readUTF());
        DataOutputStream out =
            new DataOutputStream(server.getOutputStream());
        out.writeUTF("Thank you for connecting to " + server.getLocalSocketAddress() +
            "\nGoodbye!");
        server.close();
    }catch(SocketTimeoutException s)
    {
        System.out.println("Socket timed out!");
        break;
    }catch(IOException e)
    {
        e.printStackTrace();
        break;
    } } }

public static void main(String [] args)
{
```

```
int port = Integer.parseInt(args[0]);  
  
try  
{  
    Thread t = new GreetingServer(port);  
    t.start();  
}catch(IOException e)  
{  
    e.printStackTrace(); } } }
```

2.6 PRE LAB QUESTIONS

1. What is client?
2. What is server?
3. Which server you are using in the Lab.
4. What is URL?
5. Define Socket Programming

2.7 LAB ASSIGNMENT

1. Simple java program on Java Networking?
2. Simple Java Program using Socket classes and methods?
3. Simple java program on java IOException?

2.8 POST LAB QUESTIONS

1. Connection is an Interface or not?
2. Define Abstract class?
3. which interfaces you are using in the Lab to establish a connection
4. what is ipaddress.
5. what are the methods using to perform this program

2.9 INPUT & OUTPUT:

Input:

```
$ java GreetingServer 6066  
Waiting for client on port 6066  
$java GreetingClient localhost 6066  
Connecting localhost on port 6066  
Just connected to localhost/127.0.0.1:6066  
Server says thank u for connecting to /127.0.0.1:6066  
GoodBye!
```

EXPERIMENT- 3**3.1 OBJECTIVE:**

Write a java program to create an employee class with the data members Emp_id, name, Department and create member function to get the employee information ,display the details.

3.2 RESOURCE:

JDK 1.6

3.3 PROGRAM LOGIC:

1. Define Class and members and methods.
2. Create member function
3. Read the information from class.

3.4 PROCEDURE:

1. Compile Java Program.
2. Execute Java Program.

3.5 PROGRAM:

```
import java.util.Scanner;
```

```
class Employee
```

```
{
```

```
    int Id;
```

```
    String Name;
```

```
    int Age;
```

```
    long Salary;
```

```
    void GetData() // Defining GetData()
```

```
{
```

```
    Scanner sc = new Scanner(System.in);
```

```
    System.out.print("\n\tEnter Employee Id : ");
```

```
    Id = Integer.parseInt(sc.nextLine());
```

```
    System.out.print("\n\tEnter Employee Name : ");
```

```
    Name = sc.nextLine();
```

```
    System.out.print("\n\tEnter Employee Age : ");
```

```
Age = Integer.parseInt(sc.nextLine());
System.out.print("\n\tEnter Employee Salary : ");
Salary = Integer.parseInt(sc.nextLine());
    }
void PutData()          // Defining PutData()
{
    System.out.print("Display:");
    System.out.print("\n\tEmployee Id : "+Id);
    System.out.print("\n\tEmployee Name : "+Name);
    System.out.print("\n\tEmployee Age : "+Age);
    System.out.print("\n\tEmployee Salary : "+Salary);
}

public static void main(String args[])
{
    Employee E = new Employee();// Creating Object
    E.GetData();          // Calling GetData()
    E.PutData();         // Calling PutData()
}
}
```

3.6 PRE LAB QUESTIONS

1. What is function?
2. Difference between Class and Object.
3. What is method Overloading
4. Difference between method overloading and method overriding?
5. Define String args []..?

3.7 LAB ASSIGNMENT

1. Write a java program object and class concept.
2. Write a java program on calling of class methods.
3. Write a java program on Scanner class.

3.8 POST LAB QUESTIONS

1. How to convert from string to Integer?
2. How to call a function?
3. What is meant by method signature?
4. How to create an object?
5. Difference between static and Heap memory

3.9 INPUT & OUTPUT:

Input:

Enter Employee Id:100

Enter Employee Name:Tagore

Enter Employee Age:38

Enter Employee Salary:25000

OutPut:

Display:

Enter Employee Id:100

Enter Employee Name:Tagore

Enter Employee Age:38

Enter Employee Salary:25000

EXPERIMENT- 4**4.1 OBJECTIVE:**

Write a java program to create a package for simple arithmetic operations

4.2 RESOURCE:

Jdk 1.6

4.3 PROGRAM LOGIC:

1. import user define package .
2. do arithmetic operations with different methods.
3. call the methods with Math object.

4.4 PROCEDURE:

1. Create a folder for Package purpose.
2. keep the class file in created folder and Compile java program
3. Execute Java Program

4.5 PROGRAM:

Testprogram:

```
import arithmetic.*;

class Test
{
public static void main(String as[])
{
MyMath m=new MyMath();
System.out.println(m.add(8,5));
System.out.println(m.sub(8,5));
System.out.println(m.mul(8,5));
System.out.println(m.div(8,5));
System.out.println(m.mod(8,5));
}

}
```

Package Program:

```
package arithmetic;
```

```
public class MyMath
```

```
{
```

```
public int add(int x,int y)
```

```
{
```

```
return x+y;
```

```
}
```

```
public int sub(int x,int y)
```

```
{
```

```
return x-y;
```

```
}
```

```
public int mul(int x,int y)
```

```
{
```

```
return x*y;
```

```
}
```

```
public double div(int x,int y)
```

```
{
```

```
return (double)x/y;
```

```
}
```

```
public int mod(int x,int y)
```

```
{
```

```
return x%y;
```

```
}
```

```
}
```

4.6 PRE LAB QUESTIONS

1. Define package?
2. What is purpose of "extend" keyword?
3. What do you mean classpath?
4. How to create a package?
5. How to import a package?

4.7 LAB ASSIGNMENT

1. Write a java program with Math class and Methods.
2. Write a java program create class with methods with different argument methods.

4.8 POST LAB QUESTIONS

1. What is difference between absolute path and classpath
2. What is purpose of "return" keyword ?
3. What is purpose of "this" keyword?
4. How to access a class in another package?
5. What is difference between class and interface?

4.9 INPUT & OUTPUT:

Input & OutPut:

13

3

40

1.6

3

EXPERIMENT- 5**5.1 OBJECTIVE:**

Write a java Program to create userdefined Exception called "String Not Found" Exception when the user entered input is not Equal to "INDIA".

5.2 RESOURCE:

JDK 1.6

5.3 PROGRAM LOGIC:

1. Create a user define method.
2. Check whether input is string.
3. Catch the Exception.

5.4 PROCEDURE:

1. Compile the java program
2. Execute the java program

5.5 PROGRAM:

```
import java.io.*;

import java.lang.Exception;

class stringnotmatch extends Exception
{
stringnotmatch(String msg)
{
super(msg);
}
}

class india
{
public static void main(String args[]) throws Exception
{
String s1;

System.out.println("enter string");

BufferedReader br=new BufferedReader(new InputStreamReader(System.in));

s1=br.readLine();
```

```
try{
if(s1.equalsIgnoreCase("INDIA"))
System.out.println("match");
else
throw new stringnotmatch("no match");
}
catch(stringnotmatch e)
{
System.out.println("stringnotmatch caught");
System.out.println(e.getMessage());
}
}
}
```

5.6 PRE LAB QUESTIONS

1. What is Exception handling?
2. What is Exception?
3. What is the difference between Exception and Error in java ?
4. What is the difference between throw and throws ?
5. What is the importance of finally block in exception handling ?

5.7 LAB ASSIGNMENT

1. Write a java program for simple Exception Check?
2. Write a java program to read input from System.in?

5.8 POST LAB QUESTIONS

1. What will happen to the Exception object after exception handling ?
2. How does finally block differ from finalize() method ?
3. Define user defined Exception?
4. What is Bug?
5. What is the use of try,catch,finally blocks?

5.9 INPUT & OUTPUT:

Input & OutPut:

Enter string:india

Stringmatched

Enter string:Tagore

Stringnotmatched caught exception

EXPERIMENT- 6**6.1 OBJECTIVE:**

Write a HTML to create user registration form with the following constraints; validate the registration, user login, user profile, and payment by credit card pages using javascript.

6.2 RESOURCE:

Internet Explorer, Notepad

6.3 PROGRAM LOGIC:

1. Enter the values in Registration Form.
2. Validate all the fields in Registration Form.

6.4 PROCEDURE:

Enter the URL path in Internet Explorer.

6.5 PROGRAM:

HTML code: Demo Registration.html

```
<html >
<head>

    <!--external javascript-->
<script typ="text/javascript" src="validation.js" >
</script>

</head>
<body>

<center>
<h1>Demo Registration Form</h1>
<form name="form1" method="post" action="success.html">

<table border='0'>

}
```

6.6 PRE LAB QUESTIONS

1. What is HTML?
2. What is Form tag and its attributes.
3. What are the restrictions of GET and POST methods
4. What is validation?
5. What is meant by client side validations?

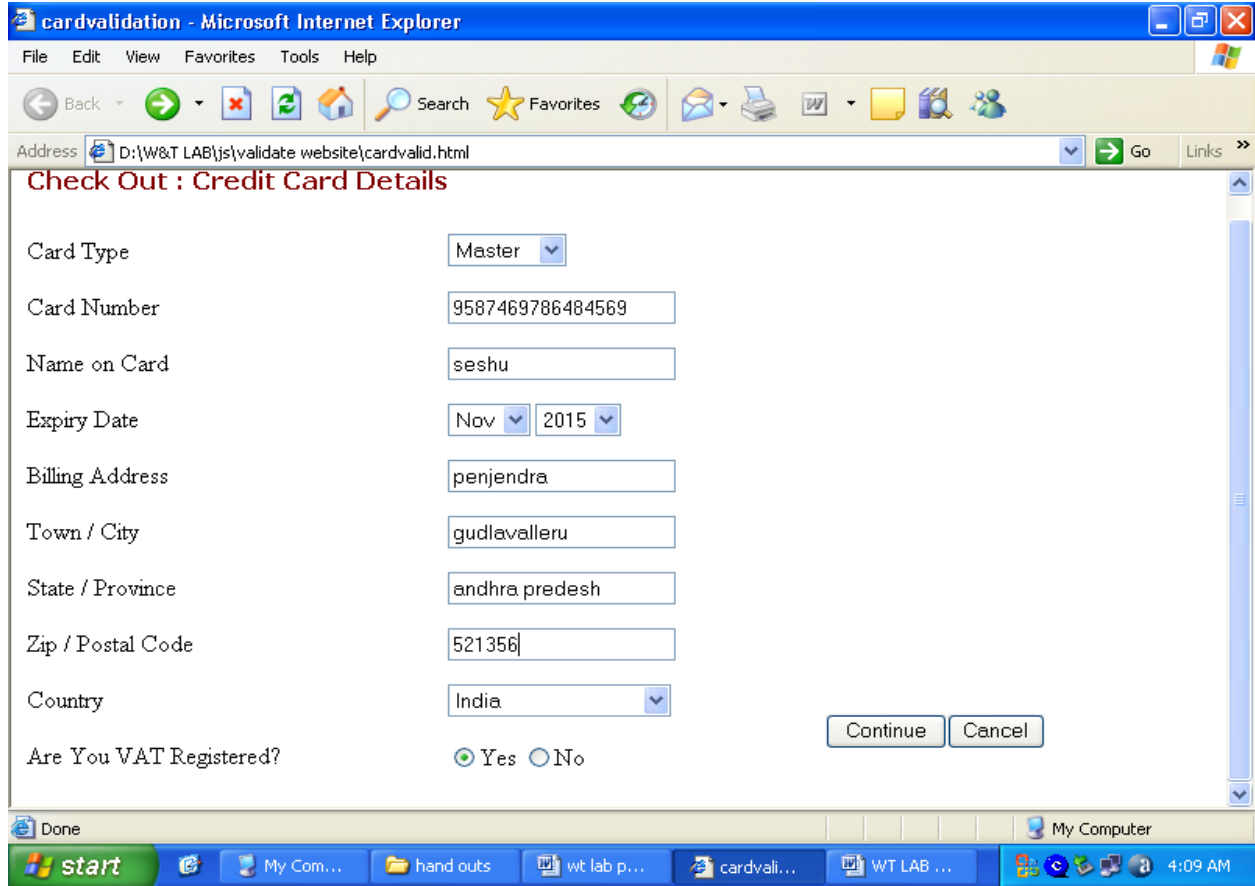

6.7 LAB ASSIGNMENT

1. Write a simple HTML program.
2. Write a simple Java Script program.
3. Write a simple HTML program With Form attributes.

6.8 POST LAB QUESTIONS

1. What is the purpose of alert box?
2. Define javascript objects
3. How to handle events in javascript
4. What is meant by confirm box in javascript
5. what is the purpose of document object

6.9 INPUT & OUTPUT:
Enter URL path in Explorer:

Demo Registration Form

First Name:*

Last Name:*

Gender:* Male Female

Date of Birth:* DD / MMM / YYYY

Address:*

Contact Number:*

Email:*

*- Mandatory

EXPERIMENT- 7**7.1 OBJECTIVE:**

Create and save an XML document at the server, which contains 10 users information .Write a program which takes user id as input and returns the user details by taking the user information from the XML document.

7.2 RESOURCE:

NotePad,Internet Explorer, TomCat Server.

7.3 PROGRAM LOGIC:

1. Create Ten users information in XML.
2. Create an HTML File with Textbox and Button.
3. Extract values from XML.

7.4 PROCEDURE:

Enter User id in TextBox and click submit button

7.5 PROGRAM:

student.dtd:

```
<!ELEMENT student(rollnum,name,parntname,branch,year,addr,email,phno)>
<!ELEMENT roll_no(#PCDATA)>

7.6 PRE LAB QUESTIONS

1. What is meant by XML?
2. Explain the purpose of XML?.
3. What is meant by userdefined tags?
4. Explain the purpose of XML parser.
5. What is the difference between DOM and SAX parser

7.7 LAB ASSIGNMENT

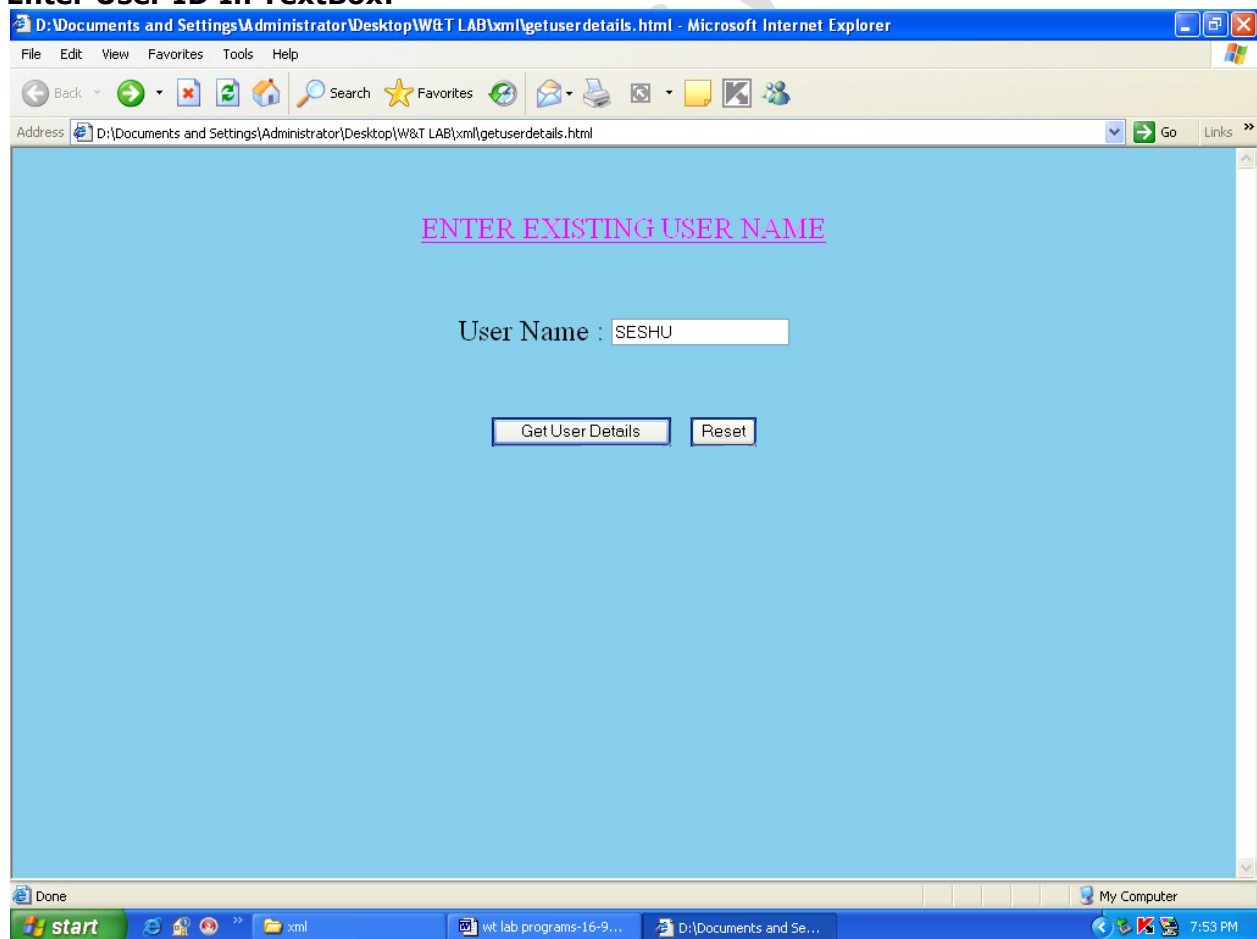

1. Write a simple XML.
2. Write a simple HTML program.
3. Installation Procedure of TomCat.

7.8 POST LAB QUESTIONS

1. What is the difference between PCDATA and CDATA
2. What is DTD?
3. How can we define schema?
4. what is meant by wellformed XML document.
5. what is meant by namespace?

7.9 INPUT & OUTPUT:

Enter User ID In TextBox:

EXPERIMENT- 8

8.1 OBJECTIVE:

Write a XHTML form for Employee information like Emp_id, Name, Department Name, Phone, Email using JavaScript check the validation for each field (the first character of Emp_id is followed by number, name should accept 20 characters, Phone max 8 digits, email)

8.2 RESOURCE:

Notepad, Internet Explorer

8.3 PROGRAM LOGIC:

1. Enter the values in Employee information Form.
2. Check fields with JavaScript validation name 20 characters and Phone 8 digits(max).

8.4 PROCEDURE:

1. Create HTML File with employee Details.
2. Check validation with JavaScript.

8.5 PROGRAM:

```
<html>

<head>

<title>Registration Form</title>

<script type="text/javascript">

<!--

function validate_form ( )

{

if ( document.emp.emp_name.value == "" )

{

alert ( "Please fill in the 'Your Employee Name' box." );

return false;

}

}
```

```
if ( document.emp.num.value == "" )
{
alert ( "Enter Employee Number" );

return false;
}

alert("sucessfully Submitted");

return true;
}

if (!(/^\\w+([\\.-]?\\w+)*@\\w+([\\.-]?\\w+)*\\.\\w{2,3})+$/).test(document.emp.email_id.value))
{
    alert("You have entered an invalid email address!")

    return (false)
}

function isNumberKey(evt)
{
    var charCode = (evt.which) ? evt.which : event.keyCode;
    if (charCode != 46 && charCode > 31
        && (charCode < 48 || charCode > 57))
    {alert("Enter Number");

    return false;
}
```

```
}

    return true;

}

//-->

</script>

</head>

<body bgcolor="#FFFFFF">

<form name="emp" action="" onsubmit="return validate_form();" method="post">

<table align="center" width=40% width="100%" cellspacing="2" cellpadding="2"
border="5">

    <tr>

        <td colspan="2" align="center"><b>Employee Registration Form.</b></td>

    </tr>

    <tr>

        <td align="left" valign="top" width="41%">Employee Name<span

    <td width="57%">

<input type="text" value="" name="email_id" size="24"></td>

</tr>

<tr>

    <td colspan="2">
```

8.9 INPUT & OUTPUT:

The screenshot shows a web browser window with a single tab titled 'Registration Form'. The address bar contains the file path: file:///C:/Documents%20and%20Settings/Administrator/Desktop/reg.html. The browser interface includes navigation buttons (back, forward, refresh), a search icon, and a 'my' profile icon. The main content area displays the 'Employee Registration Form' with the following fields and controls:

| Employee Registration Form. | |
|-----------------------------|----------------------|
| Employee Name* | <input type="text"/> |
| Employee Number* | <input type="text"/> |
| Address | <input type="text"/> |
| Contact Number | <input type="text"/> |
| Job Location | Default ▾ |
| Designation | Default ▾ |
| Email* | <input type="text"/> |
| Submit Reset All | |

EXPERIMENT- 9**9.1 OBJECTIVE:**

Write a java servlet program to display the current time on the server

9.2 RESOURCE:

Tomcat Server, JDK 1.6, Servlet API.

9.3 PROGRAM LOGIC:

1. Read the input from system .
2. Display the Time from System.

9.4 PROCEDURE:

1. Set ClassPath for running Servlet.
2. Install Tomcat Server.
3. Compile Servlet Program.
4. Execute Servlet Program.

9.5 PROGRAM:

```
import java.io.*;
import java.util.Date;
import javax.servlet.*;
import javax.servlet.http.*;

// Extend HttpServlet class
public class CurrentDate extends HttpServlet {

    public void doGet(HttpServletRequest request,
        HttpServletResponse response)
        throws ServletException, IOException
    {
        // Set response content type
        response.setContentType("text/html");

        PrintWriter out = response.getWriter();
        String title = "Display Current Date & Time";
        Date date = new Date();
        String docType =
            "<!doctype html public \"-//w3c//dtd html 4.0 \" +
            \"transitional//en\">\n";
        out.println(docType +
            "<html>\n" +
            "<head><title>" + title + "</title></head>\n" +
            "<body bgcolor=\"#f0f0f0\">\n" +
            "<h1 align=\"center\">" + title + "</h1>\n" +
            "<h2 align=\"center\">" + date.toString() + "</h2>\n" +
            "</body></html>");
    }
}
```

9.6 PRE LAB QUESTIONS

- 1 What is difference between CGI and Servlets
- 2 What is Servlet?
- 3 Mention the interface available in the javax.servlet package
- 4 What are the differences between GenericServlet and HttpServlet?
- 5 Explain about Servlet Lifecycle methods?

9.7 LAB ASSIGNMENT

1. Write a simple Servlet program.
2. Install Procedure for Tomcat.

9.8 POST LAB QUESTIONS

- 1 What is the use of service method?
- 2 What is the use if init() method?
- 3 What is the use of destroy() method?
- 4 What is difference between java and javax?
- 5 Tell some packages in javax?

9.9 INPUT & OUTPUT:**Input:****Display Current Date & Time****Mon Jun 21 21:46:49 GMT+04:00 2010**

EXPERIMENT- 10**10.1 OBJECTIVE:**

To write html and servlet to demonstrate invoking a servlet from html

10.2 RESOURCE:

NotePad, TomCat Server, ServletAPI

10.3 PROGRAM LOGIC:

1. Enter user information username and password.
2. Get the form Details in the Service method of Servlet.
3. Display the data.

10.4 PROCEDURE:

1. Run the Servlet Web Application
2. Enter the URL in Explorer.
3. Enter user information username and password.
4. Get the details from Server.

10.5 PROGRAM:**One.html**

```
<html>

<head>
<title>New Page 1</title>
</head>

<body>

<h2>Login</h2>
<p>Please enter your username and password</p>
<form method="GET" action="/htmlform/LoginServlet">
  <p> Username <input type="text" name="username" size="20"></p>
  <p> Password <input type="text" name="password" size="20"></p>
  <p><input type="submit" value="Submit" name="B1"></p>
</form>
<p>&nbsp;</p>

</body>

</html>
```

LoginServlet.java

```
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;
```

```
public class LoginServlet extends HttpServlet{
    public void doGet(HttpServletRequest request,
        HttpServletResponse response)
        throws ServletException, IOException {
        response.setContentType("text/html");
        PrintWriter out = response.getWriter();
        String name = request.getParameter("username");
        String pass = request.getParameter("password");
        out.println("<html>");
        out.println("<body>");
        out.println("Thanks Mr." + " " + name + " "
            + "for visiting roseindia<br>");
        out.println("Now you can see your password : "
            + " " + pass + "<br>");
        out.println("</body></html>");
    }
}
```

web.xml file for this program:

```
<?xml version="1.0" encoding="ISO-8859-1"?>
<!--<!DOCTYPE web-app
PUBLIC "-//Sun Microsystems, Inc.//DTD Web Application 2.3//EN"
"http://java.sun.com/dtd/web-app_2_3.dtd"> -->

<web-app>
<servlet>
    <servlet-name>Hello</servlet-name>
    <servlet-class>LoginServlet</servlet-class>
</servlet>
<servlet-mapping>
<servlet-name>Hello</servlet-name>
<url-pattern>/LoginServlet</url-pattern>
```

```
</servlet-mapping>
</web-app>
```

10.6 PRE LAB QUESTIONS

1. How to get Form fields at the server side
2. What is the purpose of Service() method in servlets
3. How many times the service() will be called
4. What is the use of contentType()
5. How to display the result to the end user in servlets

10.7 LAB ASSIGNMENT

1. Write a simple HTML program.
2. Write a simple servlet Parameter Passing Program?

10.8 POST LAB QUESTIONS

1. How we pass parameter from html to servlet?
2. What are different attributes in form tag?
3. What are attributes of text tag?
4. Tell some methods in servlet class?

10.9 INPUT & OUTPUT:

The output of the program is given below:

Login

Please enter your username and password

Username

Password

Thanks Mr. zulfiqar for visiting roseindia
 Now you can see your password : aligarh

EXPERIMENT- 11**11.1 OBJECTIVE:**

Write a java servlet program to change the Background color of the page by the color selected by the user from the list box

11.2 RESOURCE:

Notepad, Tomcat Server, ServletAPI

11.3 PROGRAM LOGIC:

1. Select the Color from the ListBox from user.
2. To change the Background color based upon Selection.

11.4 PROCEDURE:

1. Enter the URL in Explorer.
2. Select the Color in List Box.

11.5 PROGRAM:

```
<!DOCTYPE HTML PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN">
<html>
<head>
<meta http-equiv="Content-Type" content="text/html; charset=ISO-8859-1">
<title>Select the list of colors</title>
</head>
<body>
  <form action = "/ServletProject/ColorPage">
    <select name = "colors" size = 5 multiple>
      <option selected>Green</option>
      <option>Red</option>
      <option>Yellow</option>
      <option>Blue</option>
      <option>Black</option>
    </select>
    <input type = "submit" name = "submit">
  </form>
</body>
</html>
```

```
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;
```

```
/**
 * Servlet implementation class for Servlet: ColorPage
 *
 */

}
}
```

11.6 PRE LAB QUESTIONS

1. What is the purpose of javax,servlet.http package
2. What is use of web.xml document
3. What is purpose of doGet() and doPost() methods
4. What is an Interface?
5. What is meant by Business Logic in servlets?

11.7 LAB ASSIGNMENT

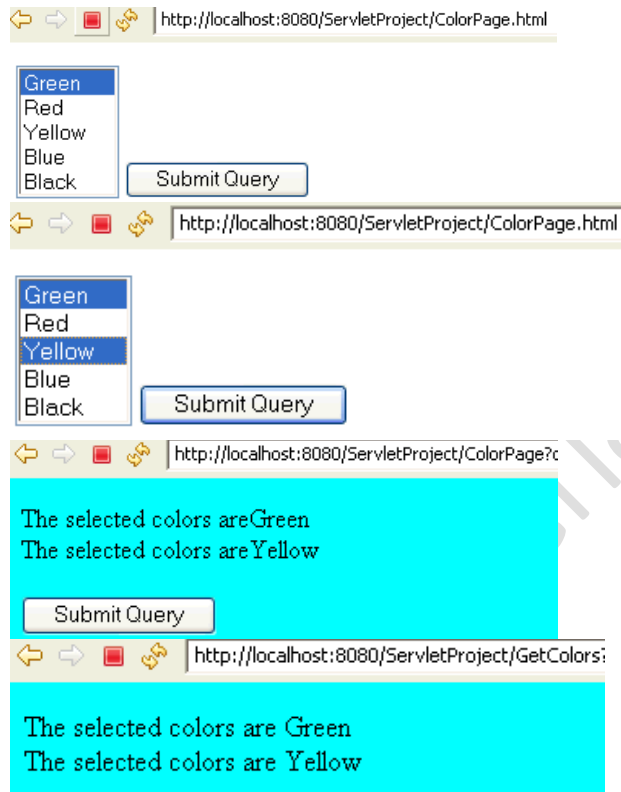

1. Write a simple servlet program.
2. Write a java program with List Box.
3. Write a HTML program.

11.8 POST LAB QUESTIONS

1. What is difference between class and interface?
2. What are the methods in servlet lifecycle?
3. How we declare list in program?
4. What are methods of color?

11.9 INPUT & OUTPUT:

The output of the program is given below:

EXPERIMENT- 12**12.1 OBJECTIVE:**

Write a java servlet program to get personal Details about the user(Like name,Address,City,Email-id) and check whether the user is eligible to vote or not

12.2 RESOURCE:

NotePad, TomCat Server, ServletAPI

12.3 PROGRAM LOGIC:

1. Enter User information.
2. Click the Summit Button.

12.4 PROCEDURE:

1. Create HTML file with user information.
2. Enter the Details in form.
3. Compile Servlet Program.
4. Execute the Servlet Program.

12.5 PROGRAM:

```
<html>

<head>
<title>New Page 1</title>
</head>

<body>

<h2>Login</h2>
<p>Please enter your username and password</p>
<form method="GET" action="/htmlform/LoginServlet">
  <p> Username <input type="text" name="username" size="20"></p>
  <p>Address <input type="text" name="address" size="20"></p>
<p>City <input type="text" name="city" size="20"></p>

<p>Age<input type="text" name="age" size="20"></p>

<p>Email id <input type="text" name="mail id" size="20"></p>

  <p><input type="submit" value="Submit" name="B1"></p>
</form>
<p>&nbsp;</p>

</body>

</html>
```

LoginServlet.java

```
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;

public class LoginServlet extends HttpServlet{

    public void doGet(HttpServletRequest request,HttpServletResponse response)
    throws ServletException, IOException {
        response.setContentType("text/html");
        PrintWriter out = response.getWriter();
        String name = request.getParameter("username");
        String address = request.getParameter("address");
        String C = request.getParameter("city");

        String age = request.getParameter("age");

        String emailid = request.getParameter("mailid");

        if(age>18)

        out.println("you are eligible for voting");
        else
        out.println("you are not eligible for voting");

    }
}
```

12.6 PRE LAB QUESTIONS

1. What is the difference between presentation logic and business logic?
2. Explain the role of init parameters
3. What is meant by deploying in servlets?
4. What is the advantage of Servlets?
5. What is the use getWrier() method in servlets.

12.7 LAB ASSIGNMENT

1. Write a simple servlet program.
2. Write a HTML program.

12.8 POST LAB QUESTIONS

1. What is the use of PrintWriter?
2. What is the use of out?
3. What is the use of Contenttype()?

12.9 INPUT & OUTPUT:

Output:

Enter the age:19

you are eligible for voting

EXPERIMENT- 13**13.1 OBJECTIVE:**

Write a java servlet program to create cookie and keep it alive on the client for 30 minutes

13.2 RESOURCE:

Tomcat server,servletAPI

13.3 PROGRAM LOGIC:

1. Create a Cookie
2. Set and Get the cookies
3. Display the cookies
4. Check the cookie, whether it is alive or not for 30 minutes

13.4 PROCEDURE:

- 1.Run the WebApplication
- 2.Enter the URL on Explorer

13.5 PROGRAM:

```
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;
```

```
public class UseCookies extends HttpServlet {
    public void doGet ( HttpServletRequest request,
        HttpServletResponse response )throws ServletException, IOException {
        PrintWriter out;
        response.setContentType("text/html");
        out = response.getWriter();
        Cookie cookie = new Cookie("CName","Cookie Value");
        cookie.setMaxAge(100);
        response.addCookie(cookie);

        out.println("<HTML><HEAD><TITLE>");
        out.println(" Use of cookie in servlet");
        out.println("</TITLE></HEAD><BODY BGCOLOR='cyan'>");
        out.println(" <b>This is a Cookie example</b>");
        out.println("</BODY></HTML>");
        out.close();
    }
}
```

13.6 PRE LAB QUESTIONS

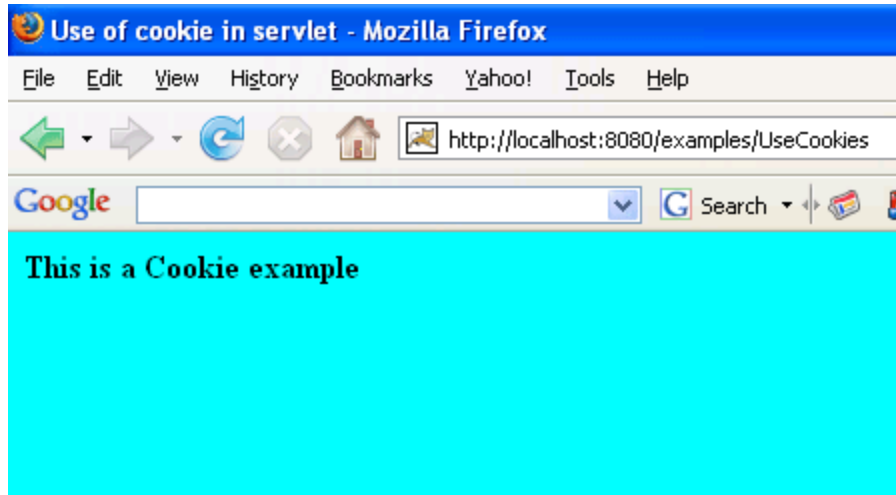

1. What is meant by Cookie?
2. Explain the role of context parameters
3. What is meant by setMaxAge()
4. What are the disadvantages of cookies
5. What is the use of setCookie() in servlets.

13.7 LAB ASSIGNMENT

1. Write a Simple Servlet Program.
2. Write a Simple Cookie program with related methods.

13.8 POST LAB QUESTIONS

1. What is the use of `getCookies()` in servlet.
2. What are packages are imported to do Cookie program?
3. What is the use of `init()` method in servlet?

13.9 INPUT & OUTPUT:

EXPERIMENT- 14**14.1 OBJECTIVE:**

Write a java servlet program to display the various client information like Connection,Host,Accept-Encoding,UserAgent

14.2 RESOURCE:

Tomcat server,servletAPI

14.3 PROGRAM LOGIC:

1. Read the getHeader() function
2. Display the details like Connection,Host,Accept-Encoding,UserAgent

14.4 PROCEDURE:

- 1.Run the WebApplication
- 2.Enter the URL on Explorer

14.5 PROGRAM:

```
import java.io.IOException;
import java.io.*;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;

public class AcceptCharset extends HttpServlet {

    public void doGet(HttpServletRequest request,
        HttpServletResponse response)
        throws ServletException,IOException {
        response.setContentType("text/html");
        PrintWriter out= response.getWriter();
        String acceptLanguage = request.getHeader("Accept-Language");
        String acceptCharset = request.getHeader("Accept-Charset");
        out.println("<html><head><title>Accept Language and
        Accept Charset</title>
        </head></html>");
        out.println("<h2>Accept Language and Accept Charset</h2>");
        out.println("AcceptLanguage: " + acceptLanguage+"<br>");
        out.println("AcceptCharset" + acceptCharset);
    }
}
```

In web.xml, do the servlet mapping.

```
<servlet>
<servlet-
name>AcceptCharset</servlet-
name>
```

```
<servlet-  
class>AcceptCharset</servlet-  
class>  
</servlet>  
  
<servlet-mapping>  
<servlet-  
name>AcceptCharset</servlet-  
name>  
<url-pattern>/AcceptCharset</url-  
pattern>  
</servlet-mapping>
```

14.6 PRE LAB QUESTIONS

1. What is getHeader() in servlets
2. Explain the role of sessions
3. What is meant by httpheader?
4. What are the disadvantages of cookies?
5. What are the disadvantages of servlets?

14.7 LAB ASSIGNMENT

1. Write a simple XML program.
2. Write a simple Servlet Program.

14.8 POST LAB QUESTIONS

1. Difference between get and post methods?
2. What is the return type of getHeader?
3. What is advantages of sessions?

14.9 INPUT & OUTPUT:**Accept Language and Accept Charset**

AcceptLanguage: en-us,en;q=0.5

AcceptCharsetISO-8859-1,utf-8;q=0.7,*;q=0.7

EXPERIMENT- 15**15.1 OBJECTIVE:**

Write a java servlet program to conduct online examinations and to display student mark list available in the database.

15.2 RESOURCE:

Tomcat server,servletAPI

15.3 PROGRAM LOGIC:

1. Connect to the database
2. Conduct Online Examinations
3. display the marks of the students

15.4 PROCEDURE:

- 1.Run the WebApplication
- 2.Enter the URL on Explorer

15.5 PROGRAM:

```
// OnlineExam.jsp
<%@ page language="java" import="java.sql.*" %>
<%@ page import="java.io.*" %>
<%@ page import="java.util.*" %>

<%

```

15.6 PRE LAB QUESTIONS

1. What is database?
2. How to create database?
3. What is the purpose of executeQuery()
4. What is meant by Statement interface
5. What is return type of executeUpdate?

15.7 LAB ASSIGNMENT

1. Write a simple HTML Program.
2. Write a Simple JSP program.
3. Write a simple program to import java packages.

15.8 POST LAB QUESTIONS

1. What is use of rs.next?
2. What is the return type of rs.next()?
3. What package we use to sql queries ?

15.9 INPUT & OUTPUT:

The students have to login to website and write online tests.

After writing the test, the marks should be displayed on the screen

www.jkmaterials.yolasite.com

EXPERIMENT- 16**16.1 OBJECTIVE:**

Write a java servlet program to display the book information using JDBC..

16.2 RESOURCE:

Tomcat server,servletAPI

16.3 PROGRAM LOGIC:

1. Connect to the Database
2. Get the Details like book name ,Author and price from the database
3. Display the details

16.4 PROCEDURE:

1. Run the WebApplication
2. Enter the URL on Explorer

16.5 PROGRAM:

```
import java.io.*;
import java.util.Enumeration;

    private ServletConfig config;

    public void init(ServletConfig config)
        throws ServletException{
        this.config=config;
    }

    public void service (HttpServletRequest req, HttpServletResponse res)
        throws ServletException, IOException {

        HttpSession session = req.getSession(true);

        res.setContentType("text/html");

        PrintWriter out = res.getWriter();

        out.println("<HTML><HEAD><TITLE>Bok Details.</TITLE>");
        try{

            //Loading Sun's JDBC ODBC Driver
            Class.forName("sun.jdbc.odbc.JdbcOdbcDriver");

            //Connect to emaildb Data source
            theConnection = DriverManager.getConnection("jdbc:odbc:emaildb", "admin", "");
```

```
Statement theStatement=theConnection.createStatement();

ResultSet theResult=theStatement.executeQuery("select * from emailists"); //Select all
records from emailists table.

//Fetch all the records and print in table
while(theResult.next()){

    out.println();

    out.println("<TR>");

    out.println("<TD>" + theResult.getString(1) + "</TD>");

    out.println("<TD>" + theResult.getString(2) + "</TD>");
    out.println("<TD>" + theResult.getString(3) + "</TD>");
    out.println("<TD>" + theResult.getString(4) + "</TD>");

    out.println("</TR>");

}
theResult.close();//Close the result set

theStatement.close();//Close statement

theConnection.close(); //Close database Connection

}catch(Exception e){

    out.println(e.getMessage());//Print trapped error.

}

out.println("</TABLE></P>");

out.println("<P>&nbsp;</P></FONT></BODY></HTML>");

}

public void destroy(){

}

}
```

16.6 PRE LAB QUESTIONS

1. What is the query for SELECT statement in database
2. How to retrieve the data from the database
3. What is the purpose of resultSet()
4. What is the purpose of rs.getString()
5. What is purpose of close() in database

16.7 LAB ASSIGNMENT

1. Write a simple Database connectivity program.
2. Write a simple servlet program.

16.8 POST LAB QUESTIONS

1. What is the use of statement?
2. What is the use of hasMore method?
3. What is the use of getNumber()?

16.9 INPUT & OUTPUT:

| S.NO | Book name | Author | price |
|------|-----------|----------------|-------|
| 1 | java | o.Relly | 400 |
| 2 | c | Herbert shiled | 450 |

EXPERIMENT- 17**17.1 OBJECTIVE:**

Write a java servlet program to create a session and display the various informations like(Last Accessed time,Modified time,Expiration)

17.2 RESOURCE:

Tomcat server,servletAPI

17.3 PROGRAM LOGIC:

1. Create a session
2. Display the informations last Accessed time and modified time.

17.4 PROCEDURE:

- 1.Run the WebApplication
- 2.Enter the URL on Explorer

17.5 PROGRAM:

```
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;
import java.net.*;
import java.util.*;

Here is the mapping of class file in web.xml.

```

<servlet>
<servlet-name>HttpSessionDisplay</servlet-name>
<servlet-class>HttpSessionDisplay</servlet-class>
</servlet>
<servlet-mapping>
<servlet-name>HttpSessionDisplay</servlet-name>
<url-pattern>/HttpSessionDisplay</url-pattern>
</servlet-mapping>

```

17.6 PRE LAB QUESTIONS

1. What is purpose of sessions?
2. How to use sessions in webpage
3. What is the purpose of session.getValue()
4. What is the purpose of session.putValue
5. What is purpose of session.getCreationTime()

17.7 LAB ASSIGNMENT

1. Write a Simple HTML program.
2. Write a Simple Servlet program.

17.8 POST LAB QUESTIONS

1. What is difference between htm and html?
2. How to enable the session in webpage?
3. Between cookie and session which one is better and why?

17.9 INPUT & OUTPUT:**New Session Value****Description about Session:**

| Information Type | Session Value |
|-------------------------------------|------------------------------------|
| ID | 39B14C30ABB7E2E376180FFEA2C56BA9 |
| Session Creation Time | Wed Jun 25 17:34:03 GMT+05:30 2008 |
| Last Session Access Time | Wed Jun 25 17:34:03 GMT+05:30 2008 |
| Number of Previous Session Accesses | 0 |

EXPERIMENT- 18**18.1 OBJECTIVE:**

Write a jsp program to display the number of visitors visited the page

18.2 RESOURCE:

Tomcat server,servletAPI

18.3 PROGRAM LOGIC:

1. create a scriplet with jsp
2. From the implicit variable application find the number of visitors visited the page

18.4 PROCEDURE:

- 1.Run the WebApplication
- 2.Enter the URL on Explorer

18.5 PROGRAM:

```
<%@ page import="java.io.*,java.util.*" %>

<html>
<head>
<title>Applcation object in JSP</title>
</head>
<body>
<%
    Integer hitsCount =
        (Integer)application.getAttribute("hitCounter");
    if( hitsCount ==null || hitsCount == 0 ){
        /* First visit */
        out.println("Welcome to my website!");
        hitsCount = 1;
    }else{
        /* return visit */
        out.println("Welcome back to my website!");
        hitsCount += 1;
    }
    application.setAttribute("hitCounter", hitsCount);
%>
<center>
<p>Total number of visits: <%= hitsCount%></p>
</center>
</body>
</html>
```

18.6 PRE LAB QUESTIONS

1. What is jsp?
2. What is the diference between servlets and jsp
3. What is meant by implicit objects
4. What is difference between application and session
5. How many implicit objects available in JSP?

18.7 LAB ASSIGNMENT

1. Write a simple JSP program.
2. Write a simple HTML Program.

18.8 POST LAB QUESTIONS

1. What is the use of scriptlets in jsp?
2. How we use of static web page?
3. How we use of dynamic web page?

18.9 INPUT & OUTPUT:

Welcome back to my website!

Total number of visits: 12

EXPERIMENT- 19**19.1 OBJECTIVE:**

Write a jsp program to implement the Book Information using JDBC

19.2 RESOURCE:

Tomcat server,servletAPI

19.3 PROGRAM LOGIC:

1. Connect to the database
2. Get the details from the database
3. Display the details

19.4 PROCEDURE:

1. Run the WebApplication
2. Enter the URL on Explorer

    </TR>

    <% } %>

</TABLE>

</BODY>
```

</HTML>

19.6 PRE LAB QUESTIONS

1. What is meant by dynamic webpage
2. What is the difference between html and jsp
3. What is meant by scriptlet?
4. How to import package in jsp
5. Where we have to save jsp file

19.7 LAB ASSIGNMENT

1. Write a simple HTML Program with Table.
2. Write a simple JSP program.

19.8 POST LAB QUESTIONS

1. How servlet is split in jsp?
2. What is the use of presentation layer in mvc model?
3. What is the use of business logic layer in mvc model?

19.9 INPUT & OUTPUT:

| BookName | Author | Publisher | Country |
|----------|---------------|------------|---------|
| java | H.S | Pearson | India |
| C | Balaguruswamy | McGrawhill | India |

EXPERIMENT- 20**20.1 OBJECTIVE:**

Write a jsp program to implement the Telephone Directory

20.2 RESOURCE:

Tomcat server,servletAPI

20.3 PROGRAM LOGIC:

1. Connect to the database
2. Get the details of Telephone directory
3. Display the Details

20.4 PROCEDURE:

1. Run the WebApplication
2. Enter the URL on Explorer

20.5 PROGRAM:

```
<html>
  <head>
    <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
    <title>JSP Page</title>

out.println("name  =" +m);
out.println("<br>");
out.println("ph no. =" +mn);
    out.println("</pre>");
    out.println("</h1>");
%>
</center>
</body>
</html>
```

20.6 PRE LAB QUESTIONS

1. What is the difference between static webpage and dynamic webpage
2. How to separate presentation logic and business logic
3. What is meant by thindriver?
4. What is query for get the data from the database
5. What are the operations available to connect to the database.

20.7 LAB ASSIGNMENT

1. Write a simple JSP Program.
2. Write a simple HTML Program.

20.8 POST LAB QUESTIONS

1. What is mvc model?
2. What are jsp elements?
3. Why we use import in jsp program?

20.9 INPUT & OUTPUT:

Input:**Create table like this**

```
create table phone(  
name varchar2(20),  
phone varchar2(15));
```

| NAME | PHONE |
|-------|------------|
| Anil | 9332667788 |
| Smith | 1126678900 |
| Suman | 9874653210 |
| Ram | 9933002211 |

For html file output is like this

Enter Information

Enter the name ::

Data came from Database:

Telephone Directory

Name=Anil
Ph no.=9332667788
